EtherNet/IP™

NJ/NX/NY Series, CS/CJ Series

High-speed High-capacity Industrial Ethernet
Global Standard
Integration of Controls and Information
Convenience of the Universal Ethernet

The Global Standard Network controls and information.

Data links between PLCs, between PLCs and multivendor devices, and communications between PTs and PLCs are realized with Universal Ethernet.

The global-standard network EtherNet/IP[TM] integrates controls and information using the latest Universal Ethernet technology and is supported by a wide range of OMRON products: PLCs, Machine Automation Controllers, HMIs, Vision sensors, Displacement Sensors, and Safety. The CJ2/NJ/NX CPU Units and NY Industrial PC Platform provide a built-in EtherNet/IP port.

Global Standard

- Highly open global standard for the FA industry with
  high future potential.
- No need for separate information and control networks.
- Improved efficiency with common Support Software
  operations.
- Safety systems can be monitored.

Convenience of the Universal Ethernet Right in Your Hands

EtherNet/IP

Global Standard

that integrates

Ethernet Technology

- Data communications with higher capacity, **9 times** higher than previous OMRON models.
- Low cost expansion for each line.
- Reduced network construction cost.
- Easy mobile communications with FA wireless LAN.

Integration of Controls and Information

- High-speed data links at optimal cycle, **30 times** faster than previous OMRON models
- FTP communications, data links, and Support Software can be used simultaneously with a single port.
- Memory map management is not required with the NJ/NX/NY-Series and CJ CPU Units.

Industrial Protocol

EtherNet/IP®

EtherNet/IP is a Global Standard for Industrial Ethernet promoted by the ODVA(ODVA,Inc.).

Open Standard

Many companies around the world, including the main manufacturers of control devices, are marketing compatible devices.

Independence

EtherNet/IP specifications are managed by the independent organization ODVA, which promotes the world-wide spread of open networks such as DeviceNet and CompoNet. It does not belong to a specific manufacturer.

High Future Potential

EtherNet/IP has already been implemented in many places internationally. Its use is expected to spread further as the number of compatible devices increases.

What Is CIP?

CIP is a Common Industrial Protocol in the OSI application layer. Routing between networks that use CIP as their base is easy. For this reason, transparent networks from sensors to host devices can be constructed easily.
CIP Safety™ adds safety functionality to CIP networks.

Global Standard

Highly Open Global Standard for FA Industry with High Future Potential

The ODVA promotes the spread of Industrial Ethernet all over the world.

EtherNet/IP can be used to communicate with many devices from various companies around the world in addition to OMRON components (such as Temperature Controllers and Sensors). The use of EtherNet/IP will rapidly increase the development of an EtherNet/IP multivendor environment (including robots and safety devices).
Integrated Information and Control Network

Seamless communications on the control line and information monitoring line with EtherNet/IP

Using the global standard open protocol (CIP), an independent network system can be created with seamless data flow between the control line and the information monitoring line.
OMRON FINS message communications can also be used on the same network because it is a standard LAN.
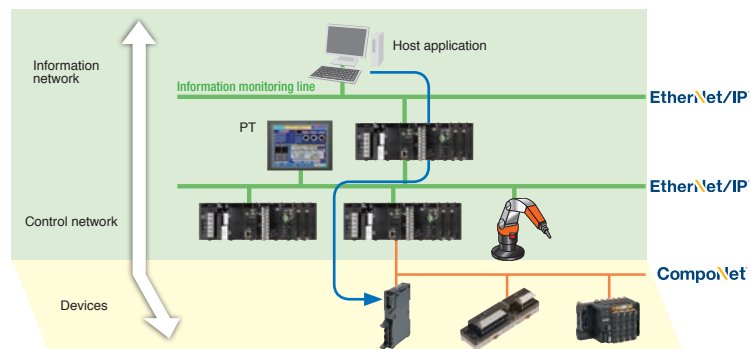

Improved operation efficiency with common Support Software operation

Use the same operating procedures for both EtherNet/IP and DeviceNet Support Software.

The same Support Software procedures can be used from a remote location for device configuration, monitoring, and program transfer for the DeviceNet and EtherNet/IP networks.
Monitor Safety Systems

Safety systems can be monitored through the EtherNet/IP.

The safety system can be monitored from a PLC by using a modular designed Safety Control Unit with a EtherNet/IP Coupler Unit.

NX Series Ether/Net Coupler Unit
NX Series Safety CPU Unit Safety I/O Unit

Flexibility System Construction and Easy Expansion

Convenience of the Universal Ethernet Right in Your Hands

Higher Data Link Capacity

9 times the capacity of previous OMRON models

High-capacity communications with high-speed high-capacity bus

All types of data, from process interlocks and manufacturing recipes to production data, can be exchanged at high speed and with optimal timing. The ability to communicate is incomparably better than previous networks, such as the Controller Link and FL-net.

Data link capacity (total)	EtherNet/IP	180,000 words	**9** times
	Controller Link	20,000 words	
	FL-net(OMRON)	8,704 words	

Data link capacity (Unit)	EtherNet/IP	180,000 words	**45** times
	Controller Link	4,000 words	
	FL-net(OMRON)	8,704 words	

Number of Units connected via data links	EtherNet/IP	256 units	**4** times
	Controller Link	62 units	
	FL-net(OMRON)	128 units	

Note: Using a built-in EtherNet/IP port on CJ2H and EtherNet/IP Units.

Low Cost Expansion for Each Line
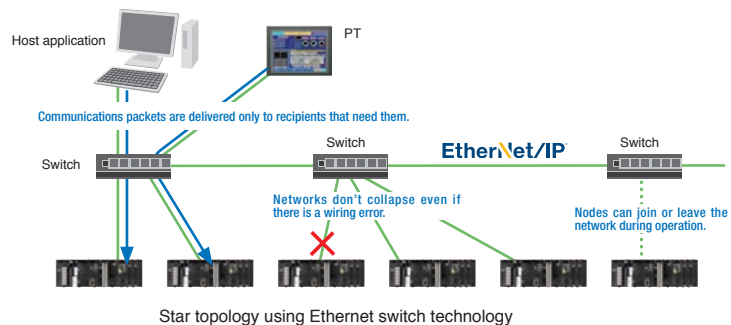

Flexible topology with the Ethernet switch

Flexible wiring and expansion are possible with Ethernet switches. This means that there will be no total network crashes caused by communications path errors, ensuring high network performance and security.

- Joining and leaving the network is possible during communications.

Nodes can leave the network during operation, enabling easy maintenance for error detection, separation, and restoration.

- Unpredictable delays caused by data collisions are minimum.
- Problems caused by wiring errors are minimized to each line.

Host application

PT

Communications packets are delivered only to recipients that need them.

Switch

Switch

EtherNet/IP

Switch

Networks don't collapse even if there is a wiring error.

Nodes can join or leave the network during operation.

Star topology using Ethernet switch technology

Reduced Network Facility and Wiring Costs

Generic LAN cables can be used.

- Metal cables of category 5, 5e, or higher can be used as LAN cables.
- Generic RJ-45 connectors can be used.

Standard wireless LAN can be used because EtherNet/IP is also Universal Ethernet.

There is no need to rewire even when layout has been changed.

- EtherNet/IP can be made wireless using the standard wireless LAN.
- High-speed Smart Roaming communications can be used for mobile units with the WE70 *1 FA Wireless LAN. The communications range can be expanded by relaying communications between access points.

*1. WE70 is final order entry date at the end of June 2020.

From Host to Field Level over Ethernet

Integration of Control and Information Networks

High-speed Data Links with Optimal Cycles for Applications

### Flexible and high-speed cyclic communications

- Grouping can be used in data link tables to create multiple sections.

  Data link table can be divided into up to 256 groups (= connections).
  The optimum communications cycle for the application can be set for each group.

- Cyclic synchronization can be set for each group.

  The communications cycle can be set to between 0.5 ms and 10 s in 0.5-ms increments. Data concurrency is maintained for each connection. The communications cycle does not change even if the number of nodes increases. The communications performance is 30 times better than that of the Controller Link.
  Example:
  Data link refresh cycle for 25 linked Unit and 20,000 words/network is reduced from 300 ms to 10 ms.

- Facilities can be easily expanded.

  When expanding facilities, all you need to do is make additions to the tables. Expansion is possible with little time and low cost.
  Note: Using a built-in EtherNet/IP port on CJ2H and EtherNet/IP Units.

Previous

PLC for production management and instructions

Process A Process B Process C

All of them are slow at 50 ms with only one set of data links.

With the EtherNet/IP

PLC for production management and instructions

Process A Process B Process C

High-speed 3-ms data links for process interlocks

Low-speed 20-ms data links for status (inspection results, processing status, etc.)

The communications cycle can be optimized for the application.

FTP, Data Links, and Support Software Can Be Used Simultaneously with One Port

With the multipurpose EtherNet/IP port, an Ethernet Unit is not required for expansion.

Using the multipurpose EtherNet/IP port built into a CJ/NJ/NX/NY Unit, a single port can be used for data link communications between PLCs, messages between PLCs, and Universal Ethernet communications, such as FTP transfers while connecting Support Software. An EtherNet/IP Unit can be added to any CS/CJ-series PLC to achieve the same functions.

Using a CJ/NJ/NX/NY CPU Unit...

Memory Map Management Becomes Unnecessary.

Freed from memory map by tags

The transmission/reception area can be specified with normal names called tag names instead of addresses for communication on data links between devices or when communication with the host application.
The efficiency of design, startup, maintenance, and upgrading are improved.

- PT and host applications can be developed in parallel.

  Network symbols defined in CJ/NJ/NX/NY Units can be used as tags when designing the PT screen.
  Design is easy: Just decide on the tag names for the information and control departments.
  Changes to allocated addresses is not needed later in development.

- Easier facility upgrading and maintenance

  Even if physical addresses change in the PLC, there is no need to make any changes in the data link settings, in the PT, or in the host application.

	Maximum data size per connection	1,444 bytes (722 words) *7	1,444 bytes	600 bytes	600 bytes (300 words) *7		1,444 bytes (722 words) *7	1,444 bytes (722 words) or 504 bytes (252 words) *7	1,280 bytes (640 words) *6 *8
	Changing tag data link parameters during operation	Supported. *9							
	Multicast packet filter function *10	Supported.							
	Explicit Messaging — Class 3 (connected)	Supported.							
	UCMM (unconnected)	Supported.							
	CIP routing	Supported. CIP routing is supported for the following remote Units: NX701-□□□□, NX502-□□□□, NX102-□□□□, NX1P2-□□□□ NJ501-□□□□, NJ301-□□□□, NJ101-□□□□, CS1W-EIP21, CJ1W-EIP21, CJ2H-CPU□□-EIP, and CJ2M-CPU3□. Using a combination of any Units above, communication can be extended up to a maximum of 8 levels.							

*1. Use NJ-series CPU Unit with version 1.03 or later and Sysmac Studio with version 1.04 or later.
When using the CPU Unit version 1.02 or earlier, the Packet interval is 10 to 10,000 ms in 1.0-ms increments and the Maximum allowed communications bandwidth per Unit is 1,000 pps.

*2. In this case, pps means "packets per second" and indicates the number of packets that can be processed in one second. Including heartbeat.

*3. If the two built-in EtherNet/IP ports are used simultaneously, the maximum communications data size for two ports in total will be reached.

*4. The allowable bandwidth varies depending on the RPI of the connection in use, the primary task period, and the number of ports simultaneously used for EtherNet/IP communications.

*5. When the Unit is performing tag data link communications where the allowable communications bandwidth per Unit is close to or greater than 30,000 pps, the following functions may not be used properly. In that case, use the built-in EtherNet/IP port on the CPU Unit or an EtherNet/IP port of a different NX-series EtherNet/IP Unit.
- Connecting the Sysmac Studio online from the EtherNet/IP port of the NX-series EtherNet/IP Unit
- Connecting the Network Configurator online from the EtherNet/IP port of the NX-series EtherNet/IP Unit
- Connecting the NA-series Programmable Terminal online from the EtherNet/IP port of the NX-series EtherNet/IP Unit
- Port forward via the NX-series EtherNet/IP Unit
- CIP message communications
- SNMP function
These functions of the NX-series EtherNet/IP Unit can be used via X Bus from the built-in EtherNet/IP port on the CPU Unit or an EtherNet/IP port of a different NX-series EtherNet/IP Unit.

*6. When using the EtherNet/IP Unit with version 3.0 or later. When using the EtherNet/IP Unit with version 2.1 or earlier, the maximum allowed communications bandwidth per Unit is 6,000 pps. When using the EtherNet/IP Unit with version 3.0 or later, the Network Configurator with version 3.57 or higher is required.

*7. To use 505 to 1,444 bytes as the data size, the system must support the Large Forward Open standard (an optional CIP specification). NJ/NX/NY-series, CS/CJ-series Units support this standard, but other companies' devices may not support it.

*8. Unit version 2.0 of built-in EtherNet/IP section: 20 words.

*9. If parameters are changed, the target built-in EtherNet/IP port or EtherNet/IP Unit will restart. When other nodes communicating with the target node, the affected data willtemporarily timeout and automatically recover later.

*10. Since the EtherNet/IP Unit is equipped with an IGMP client, unnecessary multicast packets can be filtered by using a switching hub that supports IGMP snooping.

Ordering Information

■NX-series NX701 CPU Units

Product name	Specifications			Current (Power) consumption	Model
	Program capacity	Memory capacity for variables	Number of motion axes		
NX701 CPU Units	80 MB	4 MB: Retained during power interruption 256 MB: Not retained during power interruption	256	40 W (including SD Memory Card and End Cover)	**NX701-1700**
			128		**NX701-1600**
NX701 Database Connection CPU Units		4 MB: Retained during power interruption 256 MB: Not retained during power interruption (including Memory for CJ-series Units)	256		**NX701-1720**
			128		**NX701-1620**

■NX-series NX502 CPU Units

Product name	Specifications				Model
	Program capacity	Memory capacity for variables	Maximum number of used real axes		
				Used motion control servo axes	
NX502 CPU Unit	80 MB	4 MB (Retain attributes) / 256 MB (No Retain attributes)	64 axes	64 axes	**NX502-1500**
			32 axes	32 axes	**NX502-1400**
			16 axes	16 axes	**NX502-1300**

Note1. One NX-END02 End Cover is provided with the NX502-□□□.
   2. The battery is not mounted when the product is shipped.

■NX-series NX502 EtherNet/IP Unit

Product name	Specifications			Model
	Communications	Units per CPU Unit	Power consumption	
EtherNet/IP Unit	Tag data links, Message Communications	4 max.	8.1 W max.	**NX-EIP201**

■NX-series NX102 CPU Units

Product name	Specifications					Model
	Program capacity	Memory capacity for variables	Maximum number of used real axes			
				Motion control axes	Single-axis position control axes	
NX102 CPU Unit	5 MB	1.5 MB (Retained during power interruption)/ 32 MB (Not retained during power interruption)	12	8	4	**NX102-1200**
			8	4	4	**NX102-1100**
			6	2	4	**NX102-1000**

					8 GB	128 GB CFast MLC		**NY532-1300-011443600**

■ CJ2H CPU Units (with Built-in EtherNet/IP)

Product name	I/O capacity/No. of Configuration Units (maximum No. of Expansion Racks)	Program capacity	Data memory capacity	LD instruction execution time	Current consumption (A)		Model
					5V	24V	
CJ2H CPU Units (with Built-in EtherNet/IP)	2560 points/40 Units (3 Expansion Racks max.)	400 Ksteps	832 K words (DM: 32 K words, EM: 32 K words × 25 banks)	0.016 µs	0.82 *	—	**CJ2H-CPU68-EIP**
		250 Ksteps	512 K words (DM: 32 K words, EM: 32 K words × 15 banks)				**CJ2H-CPU67-EIP**
		150 Ksteps	352 K words (DM: 32 K words, EM: 32 K words × 10 banks)				**CJ2H-CPU66-EIP**
		100 Ksteps	160 K words (DM: 32 K words, EM: 32 K words × 4 banks)				**CJ2H-CPU65-EIP**
		50 Ksteps	160 K words (DM: 32 K words, EM: 32 K words × 4 banks)				**CJ2H-CPU64-EIP**

* Add 0.15 A per Adapter when using NT-AL001 RS-232C/RS-422A Adapters. Add 0.04 A per Adapter when using CJ1W-CIF11 RS-422A Adapters.
 Add 0.20A/Unit when using NV3W-M□20L(-V1) Programmable Terminals. Refer to the CJ2 CPU Unit Catalog (Cat. No. P059) for details.

■ CJ2M CPU Units (with Built-in EtherNet/IP)

Product name	Specifications						Current consumption (A)		Model
	I/O capacity/ Mountable Units (Expansion Racks)	Program capacity	Data memory capacity	LD instruction execution time	EtherNet/IP function	Option board slot	5 V	24 V	
CJ2M (with Built-in EtherNet/IP) CPU Units	2,560 points/ 40 Units (3 Expansion Racks max.)	60K steps	160K words (DM: 32K words, EM: 32K words × 4 banks)	0.04 µs	YES	YES	0.7 *	—	**CJ2M-CPU35**
		30K steps							**CJ2M-CPU34**
		20K steps	64K words (DM: 32K words, EM: 32K words ×1 bank)						**CJ2M-CPU33**
		10K steps							**CJ2M-CPU32**
		5K steps							**CJ2M-CPU31**

* Add 0.005A, 0.030A, and 0.075A when using Serial Communications Option Boards (CP1W-CIF01/11/12), respectively.
 Add 0.15A/Unit when using NT-AL001 RS-232C/RS-422A Adapters. Add 0.04A/Unit when using CJ1W-CIF11 RS-422A Adapters.
 Add 0.20A/Unit when using NV3W-M□20L(-V1) Programmable Terminals. Refer to the CJ2 CPU Unit Catalog (Cat. No. P059) for details.

■ CS/CJ EtherNet/IP Units

Unit type	Product name	Specifications			No. of unit numbers allocated	Current consumption (A)			Model
		Communications cable	Communications type	Max. Units mountable per CPU Unit		5V	24V	26V	
CJ CPU Bus Unit	EtherNet/IP Unit	Shielded twisted-pair cable (STP), category 5, 5e or higher	Tag data links and message communications	8 *1	1	0.41	—		**CJ1W-EIP21** *2*3
CS CPU Bus Unit	EtherNet/IP Unit			8	1	0.41		—	**CS1W-EIP21** *4

*1. Up to four EtherNet/IP Units can be connected to a NJ CPU Unit. Up to seven EtherNet/IP Units can be connected to a CJ2H-CPU6□-EIP.
 Up to two EtherNet/IP Units can be connected to a CJ2M CPU Unit.
*2. The EtherNet/IP Units can be used in CJ-series (CJ1 and CJ2), CP1H, NSJ-series and NJ-series PLCs.
 EtherNet/IP Unit with unit version 2.1 or later is required to connect C1JW-EIP21 to NJ-series CPU Unit. Use NJ-series CPU Unit with version 1.01 or later and Sysmac Studio with version 1.02 or later.
*3. You cannot use the following functions if you connect to the NJ-series CPU Unit through an EtherNet/IP Unit.
 • Going online with a CPU Unit from the Sysmac Studio. (However, you can go online from the Network Configurator.)
 • Troubleshooting from an NS-series PT.
*4. The EtherNet/IP Units can be used in CS-series PLCs.

■NX-series EtherNet/IP Coupler Unit

Product name	Current consumption	Maximum I/O power supply current	Model
EtherNet/IP Coupler Unit	1.60 W or lower	10 A	**NX-EIC202**

Note: For details, refer to the NX-EIC202 datasheet, visit our Web site (www.ia.omron.com/).

■Programmable Multi-Axis Controller

Product name	Memory capacity	Port	Max. no. of controlled axes at EtherCAT port	Model
CK3M CPU Unit *1	RAM: 1 GB Built-In flash memory: 1 GB	EtherNet/IP: 1 EtherCAT: None	—	**CK3M-CPU101**
		EtherNet/IP: 1 EtherCAT:1 (DC sync)	4	**CK3M-CPU111**
		EtherNet/IP: 1 port EtherCAT: 1 (DC sync)	8	**CK3M-CPU121**
CK3E	Main memory: 1 GB Flash memory: 1 GB	EtherNet/IP: 1 EtherCAT: 1	8	**CK3E-1210**
			16	**CK3E-1310**
			32	**CK3E-1410**

Note: For details, refer to the CK3M CPU Unit datasheet or CK3E datashee, visit our Web site (www.ia.omron.com/).
*1. One CK3W-TER11 End Cover is provided with the CK3M-CPU1□1 CPU Unit.

■IP67 Remote Terminal NXR Series IO-Link Master Unit for EtherNet/IP™

Product name	Number of IO-Link ports	Degree of protection	Port connection	Model
IO-Link Master Unit for EtherNet/IP	8	IP67	M12 connector (A-cording, female)	**NXR-ILM08C-EIT**

Note: For details, refer to the NXR-Series Catalog (Cat. No. R202).

■Programmable Terminals

Product name	Specifications	Model
NA Series	15.4 inch wide screen TFT, 1280 x 800 dots, Frame color: Black *1	**NA5-15W101B-V1**
	12.1 inch wide screen TFT, 1280 x 800 dots, Frame color: Black *1	**NA5-12W101B-V1**
	9 inch wide screen TFT, 800 x 480 dots, Frame color: Black *1	**NA5-9W001B-V1**
	7 inch wide screen TFT, 800 x 480 dots, Frame color: Black *1	**NA5-7W001B-V1**
NS Series *3	15-inch TFT, 1,024 x 768 dots, Frame color: Silver	**NS15-TX01S-V2**
	15-inch TFT, 1,024 x 768 dots, Frame color: Black *2	**NS15-TX01B-V2**
	12.1-inch TFT, 800 x 600 dots, Frame color: Black *2	**NS12-TS01B-V2**
	10.4-inch TFT, 640 x 480 dots, Frame color: Black *2	**NS10-TV01B-V2**
	8.4-inch TFT, 640 x 480 dots, Frame color: Black *2	**NS8-TV01B-V2**
	5.7-inch High-luminance TFTT, 320 x 240 dots, Frame color: Black *2	**NS5-TQ11B-V2**
	5.7-inch TFT, 320 x 240 dots, Frame color: Black *2	**NS5-SQ11B-V2**

*1. The PTs are also available with silver colored frames. For details, refer to the NA Series Catalog (Cat. No. V457).
*2. The PTs are also available with ivory colored frames. For details, refer to the NS Series Catalog (Cat. No. V405).
*3. Product no longer available to order.

■FA Wireless LAN Units   (Final order entry date : The end of June, 2020)

Product name	Applicable area	Type	Model
FA Wireless LAN Units	Japan	Access point (master)	**WE70-AP**
		Client (slave)	**WE70-CL**

Note:1. Includes Pencil Antenna, Mounting Magnet, and Mounting Screws.
    2. Always use a model applicable for your area.
    There are applicable products for other areas, such as Europe, USA, Canada, and China. For details, refer to the FA Wireless LAN Unit Datasheet (Cat. No. N154).

■Vision Sensor

Product name	Specifications	Model
Vision System FH Series	All controllers	**FH-□□□0(-□□)**
Vision System FZ5 Series	High-speed Controllers	**FZ5-120□(-10)**
	Standard Controllers	**FZ5-80□(-10)**
Smart Camera FH-series	All cameras	**FHV7H-□□□□□-□(□□-□□)**
Smart Camera F430-F Series	All cameras	**F430-F□□□□□□□-□□□**
Smart Camera FQ2 Series	All Sensors	**FQ2-S□**
Optical Character Recognition Sensor FQ2-CH Series	All Sensors	**FQ2-CH□**

Note: For details, refer to the Vision System FH Series Catalog (Cat. No. Q197), Vision System FZ5 Series Catalog (Cat. No. Q203), Smart Camera FHV7 Series Catalog (Cat. No. Q265), Smart Camera F430-F/F420-F Series Catalog (Cat.No.Q272), Smart Camera FQ2 Series Catalog (Cat. No. Q193).

■Displacement Sensor

Product name	Type	Model
Displacement Sensor ZW-8000/7000/5000 Series	All Controllers	**ZW-8000T**
		ZW-7000T
		ZW-5000T

* For details, refer to the Confocal Fiber Displacement Sensor Catalog (Cat. No. Q250), the Confocal Fiber Displacement Sensor Data Sheet (Cat. No. Q261).

■ NX series Safety Communication Controller (supporting CIP Safety)

Product name	Supported communications protocol	Number of communications connectors	Network variables	Model
NX series Communication Control Unit	EtherNet/IP *1	3	2 *2	**NX-CSG320**

Note. For details, refer to the Safety Network Controller NX Series Catalog (Cat. No. F104).
*1. Routing of the CIP Safety protocol is supported.
*2. PORT1 is an independent port. PORT2A and PORT2B are the ports with a built-in Ethernet switch.

■ GI-S series Safety I/O Terminals (supporting CIP Safety)

Product name	I/O capacity			Model
	Safety inputs	Test outputs	Safety outputs (for PNP)	
Safety I/O Terminals GI-S series	12 inputs	12 outputs	4 outputs	**GI-SMD1624**
	12 inputs	12 outputs	---	**GI-SID1224**

Note. For details, refer to the Safety Network Controller NX Series Catalog (Cat. No. F104).

■ Safety Network Controller

Product name	No. of I/O points			Model
	Safety inputs	Test outputs	Safety outputs	
Safety Network Controller	16	4	8	**NE1A-SCPU01-EIP**
	40	8	8	**NE1A-SCPU02-EIP**

Note: For details, refer to the website at: http://www.ia.omron.com/.

■ Safety Laser Scanner

Product name	Specifications		Model
		Max. Operating Range (Safety Zone)	
Safety Laser Scanner	OS32C with EtherNet/IP and back location cable entry	3m	**OS32C-BP-DM**
		4m	**OS32C-BP-DM-4M**
	OS32C with EtherNet/IP and side location cable entry *	3m	**OS32C-SP1-DM**
		4m	**OS32C-SP1-DM-4M**

* For OS32C-SP1(-DM), each connector is located on the left as viewed from the back of the I/O block.
Note1: CD-ROM (Configuration tool)
Note2: For details, Refer to the Safety Laser Scanner OS32C Catalog (Cat. No. Z298).

■ Code Reader

Product name	Specifications	Model
Code Reader V430-F Series	All Code Reader	**V430-F□□□□□□-□□□**

Note: For details, refer to the MicroHAWK V430-F Series Datasheet (Cat.No.Q274).

■RFID System

Product name	Size	Model
RFID System V680S series Reader/Writer	50 × 50 × 30 mm	**V680S-HMD63-EIP**
	75 × 75 × 40 mm	**V680S-HMD64-EIP**
	120 × 120 × 40 mm	**V680S-HMD66-EIP**
UHF RFID System V780 Series Reader/Writer	250 × 250 × 70 mm	**V780-HMD68-EIP-□□**

Note: For details, Refer to the RFID System V680S Series Catalog (Cat. No. Q196), UHF RFID System V780 Series Catalog (Cat. No. Q256).

■Industrial Switching Hubs

Product name	Functions	No.of ports	Accessories	Current consumption (A)	Model
Industrial Switching Hubs	Quality of Service (QoS): EtherNet/IP control data priority 10/100BASE-TX, Auto-Negotiation	5	Power supply connector	0.07	**W4S1-05D**

■Laser Marker

Product name	Specifications	Model
Fiber Laser Marker MX-Z2000H series	All controllers	**MX-Z20□□H(-□□)**

Note: For details, refer to the Fiber Laser Marker MX-Z2000H-V1 series Catalog (Cat.No.Q269).

■ Switch Mode Power Supply

Note. For details on normal stock models, contact your nearest OMRON representative.

With Indication Monitor

Power rating	Rated input voltage	Rated output voltage (DC)	Rated output current	Maximum boost current	Model number
90 W	100 to 240 VAC (allowable range: 85 to 264 VAC, 90 to 350 VDC)	24 V	3.75 A	---	**S8VK-X09024A-EIP**
120 W		24 V	5 A	6 A	**S8VK-X12024A-EIP**
240 W		24 V	10 A	15 A	**S8VK-X24024A-EIP**
480 W		24 V	20 A	30 A	**S8VK-X48024A-EIP**

Note. For details, refer to the S8VK-X Catalog (Cat. No. T210).

Without Indication Monitor

Power rating	Rated input voltage	Rated output voltage (DC)	Rated output current	Maximum boost current	Model number
30 W	100 to 240 VAC (allowable range: 85 to 264 VAC, 90 to 350 VDC)	5 V	5 A *1	6 A	**S8VK-X03005-EIP**
60 W		12 V	4.5 A *2	5.4 A	**S8VK-X06012-EIP**
		24 V	2.5 A	3 A	**S8VK-X06024-EIP**
90 W		24 V	3.75 A	---	**S8VK-X09024-EIP**
120 W		24 V	5 A	6 A	**S8VK-X12024-EIP**
240 W		24 V	10 A	15 A	**S8VK-X24024-EIP**
480 W		24 V	20 A	30 A	**S8VK-X48024-EIP**

Note. For details, refer to the S8VK-X Catalog (Cat. No. T210).
＊1. Output power is 25 W at rated output current.
＊2. Output power is 54 W at rated output current.

■ Motor Condition Monitoring Device

Monitoring type	Power supply voltage	Model
Vibration & temperature type	100 to 240 VAC	**K6CM-VBMA-EIP**
	24 VAC/VDC	**K6CM-VBMD-EIP**
Insulation resistance type	100 to 240 VAC	**K6CM-ISMA-EIP**
	24 VAC/VDC	**K6CM-ISMD-EIP**
Comprehensive current diagnosis type	100 to 240 VAC	**K6CM-CI2MA-EIP**
	24 VAC/VDC	**K6CM-CI2MD-EIP**

Note. For details, refer to the Motor Condition Monitoring Device K6CM series Catalog (Cat. No. N218).

■Software

How to Select Required Support Software for Your Controller

The required Support Software depends on the Controller to connect. Please check the following table when purchasing the Support Software.

Controller	Software
NJ/NX/NY-series	Automation Software Sysmac Studio
CS, CJ, CP, and other series	FA Integrated Tool Package CX-One

Automation Software Sysmac Studio

Please purchase a DVD and required number of licenses the first time you purchase the Sysmac Studio. DVDs and licenses are available individually. Each model of licenses does not include any DVD.

Product name	Specifications	Number of licenses	Media	Model
Sysmac Studio Standard Edition Ver.1.□□	The Sysmac Studio is the software that provides an integrated environment for setting, programming, debugging and maintenance of machine automation controllers including the NJ/NX-series CPU Units, NY-series Industrial PC, EtherCAT Slave, and the HMI.	— (Media only)	Sysmac Studio (32-bit) DVD	**SYSMAC-SE200D**
	Sysmac Studio runs on the following OS. *1 Windows 7 (32-bit/64-bit version)/Windows 8.1 (32-bit/64-bit version)/ Windows 10(32-bit/64-bit version)/Windows 11(64-bit version)	— (Media only)	Sysmac Studio (64-bit) DVD	**SYSMAC-SE200D-64**
	The Sysmac Studio Standard Edition DVD includes Support Software to set up EtherNet/IP Units, DeviceNet slaves, Serial Communications Units, and Support Software for creating screens on HMIs (CX-Designer). Refer to your OMRON website for details.	1 license *2	—	**SYSMAC-SE201L**

*1. Model "SYSMAC-SE200D-64" runs on Windows 10 (64 bit) or higher.
*2. Multi licenses are available for the Sysmac Studio (3, 10, 30, or 50 licenses).

FA Integrated Tool Package CX-One

Product name	Specifications	Number of licenses	Media	Model
FA Integrated Tool Package CX-One Ver. 4.□	The CX-One is a comprehensive software package that integrates Support Software for OMRON PLCs and components. CX-One runs on the following OS. Windows 7 (32-bit/64-bit version)/Windows 8 (32-bit/64-bit version)/ Windows 8.1 (32-bit/64-bit version)/Windows 10 (32-bit/64-bit version) CX-One Ver. 4.□ includes Network-Configurator. For details, refer to the CX-One Catalog (Cat. No. R134).	1 license*	DVD	**CXONE-AL01D-V4**

* Multi licenses are available for the CX-One (3, 10, 30, or 50 licenses). Site licenses are available for users who will run CX-One on multiple computers.

■FA Communications Software (EtherNet/IP Compatible)

Name	Specifications	Model
CX- Compolet *	Software components that can make it easy to create programs for communications between a computer and controllers. (Product includes CX-Compolet and SYSMAC Gateway functions.) Supported execution environment: .NET Framework (2.0, 3.0, 3.5, 4.0, 4.5.1, 4.6, 4.7 or 4.8) Development environment: Visual Studio 2010/2012/2013/2015/2017/2019 Development languages: Visual Basic, C# Supported communications: Equal to SYSMAC Gateway.	**WS02-CPLC1**
SYSMAC Gateway	Communications middleware for personal computers running Windows. Supports CIP communications and tag data links (EtherNet/IP) in addition to FinsGateway functions. (Fins Gateway functions are included.) Supported communications: RS-232C, USB, Controller Link, Ethernet, EtherNet/IP	**WS02-SGWC1**

Supported OS: Windows 7 (32bit/64bit)/Windows 8 (32bit/64bit)/Windows 8.1 (32bit/64bit)/Windows 10 (32-bit/64-bit version)
Windows Server 2008 (32bit/64bit)/Windows Server 2008 R2 (64bit)/Windows Server 2012 (64bit)/
Windows Server 2012 R2 (64bit)/Windows Server 2016 (64bit)/Windows Server 2019 (64bit)
Note. One license is required per computer (execution environment).
For details, Refer to the FA Communications Software Catalog (Cat. No. V302).

* A standalone product that does not include SYSMAC Gateway functions (WS02-CPLC2) is also available.

Note: Do not use this document to operate the Unit.
